EDUCATION

Virginia Tech, Blacksburg, VA
B.S in Computer Engineering
College of Engineering

Expected Graduation: *May 2028*

GPA: 4.0/4.0

WORK EXPERIENCE

Amazon

Arlington, VA

Extern

May 2025

- Enhanced an internal Auto Scaling scheduling tool by implementing timezone-aware scaling events using TypeScript and date-fns-tz, improving accuracy of multi-region scheduling.
- Developed reusable AWS CDK constructs for CloudWatch alarms, metrics, and resource tagging, standardizing monitoring and cost-management practices across services.
- Streamlined infrastructure operations by automating scaling event configuration, timezone conversions, and retrieval of stack resources directly from CloudFormation outputs.

Makchang Dodook

Springfield, VA

Server

January 2025- June 2025

- Cultivated customer service and conflict resolution skills, maintaining professionalism and positive guest experiences under pressure.
- Developed strong time management, multitasking, and adaptability skills while balancing shifting priorities during peak hours.

PROJECTS

Resy Booking Bot

February 2026

- Built a secure, full-stack reservation automation system using Next.js, TypeScript, PostgreSQL, Prisma, and FastAPI, supporting concurrent automated booking tasks with real-time status monitoring.
- Implemented JWT authentication, AES-256-GCM encrypted credential storage, and user-scoped APIs, ensuring complete data isolation and secure automation workflows.
- Designed an intelligent slot-selection and retry algorithm that tripled booking success rates versus basic polling approaches.

Storefront

December 2025

- Built a full-stack e-commerce platform with Next.js and TypeScript, using Prisma + PostgreSQL with migrations and seed tooling for reliable data modeling.
- Implemented JWT cookie authentication with hashed passwords and role-based access control, securing admin routes and dashboards.
- Developed server-side product management APIs and a persistent client-side cart with checkout flow, improving UX and system security.

Remote PC Access Tool

June 2025

- Developed a full-stack web application using Next.js to provide remote, on-demand access to a home server, eliminating the need for the machine to run 24/7.
- Integrated a Wake on LAN (WoL) feature by leveraging the 'wake-on-lan' Node.js package on the back-end, enabling the remote power-on of a target Windows PC.

SKILLS

Technical: Java, Python, JavaScript, React, Node.js, PostgreSQL, Git, FastAPI, Docker, GitHub Actions

Languages: Fluent in English, Vietnamese
